

QUBO

5 AXES BRIDGE CUTTING MACHINE

CNC MONOBLOC CUTTING MACHINE
WITH 362° ROTATING HEAD
AND FIXED WORKBENCH
FOR DISCS OF Ø 625 MM MAX.

CNC cutting and profiling center with monobloc STRUCTURE and 5 interpolated axes for cutting, profiling, shaping, on slabs and pieces of marble, granite, natural and artificial stone. Machine with 362° disc-head rotation and reclining from 0 to 90° for using blades (min/max diam. mm 400/625) and horizontal disc.

Electrospindle with variable speed up to 6000 rpm and $\frac{1}{2}$ " thread on shaft for tool's hooking.

The structure of the machine is really MONOBLOC (the basement is made up of one single welded piece) and this solution makes the machine be extremely sturdy and precise for producing all the stone products used in the constructions.

QUBO is very easy to use both in manual mode (directly by the touch-screen push button panel and using practical manipulators) and in the automatic mode thanks to the use of a CAD-CAM software.
